ANKY

The consciousness writing protocol

Write unedited for 8 minutes.
Receive a reflection of your mind.

$25,000 for 0.888%

~$2.8M pre-money | USDC on Base

THE PROBLEM

No model has ever seen raw human thought.

- Every LLM trained on performative text -- edited, curated, written for an audience. The unfiltered mind is an untapped dataset.
- $280B mental health industry with no product for raw consciousness writing. Journaling apps optimize for retention, not revelation.
- AI reflects back what you want to hear. Nobody builds AI that shows you what you need to see.

THE SOLUTION

Anky is a consciousness writing protocol.

- 8 minutes. No backspace. No delete. No arrows. The interface enforces radical honesty.
- AI generates a psychological reflection, unique art, personalized meditation, and breathwork.
- Longitudinal memory -- Anky remembers your patterns, tensions, and growth across sessions.
- Training an LLM from scratch on raw unedited human thought. The first model of its kind.

HOW IT WORKS

1. WRITE

Open anky.app. Start typing. No prompt, no editing. Checkpoints every 30s.

2. COMPLETE

Reach 8 minutes. Stop for 8 seconds and you're done.

3. REFLECT

AI mirrors your psychology. 3-word title. Unique art piece.

4. INTEGRATE

Personalized meditation + breathwork from your emotional signature.

5. EVOLVE

Your writing feeds your profile, the collective model, and Anky's memory.
